MAIN FEATURES

JOB VACANCIES, AUSTRALIA, NOVEMBER 1983 TO MAY 1986

The estimated number of job vacancies in Australia at 16 May 1986 was 54,400. This was a decrease of 4,600 from the February 1986 estimate. The decrease of 2,200 from the May 1985 estimate is not statistically significant.

On 16 May 1986 the percentage of vacancies measured by the survey as being registered with the Commonwealth Employment Service was 27.9 per cent.

NOTE: The results of the job vacancy surveys conducted since November 1983 are not strictly comparable with those of previous surveys. See paragraph 3 below.

EXPLANATORY NOTES

Introduction

1. This publication contains results of a new sample survey introduced in November 1983. The survey, which is conducted by telephone, obtains information from employers on the number of job vacancies as at the third Friday of the middle month of the calendar quarter.

2. To assist in assessing the extent to which vacancies are registered with the Commonwealth Employment Service (CES), respondents in the May surveys each year are asked the number of their job vacancies that is registered as at the survey date. The question is asked only of respondents who report current vacancies. The information enables estimates to be made of the proportion of vacancies within the scope of the survey that is registered with the CES.

3. Estimates contained in this publication are not strictly comparable with those obtained prior to November 1983. Background information about the job vacancies series is provided in *Information Paper: New Statistical Series: Employment, Average Weekly Earnings, Job Vacancies and Overtime* (6256.0) issued on 21 June 1984.

Scope of the survey

4. All vacancies (as defined in paragraph 7) for wage and salary earners are represented in the survey, except those:

- in the Australian permanent defence forces;
- in enterprises primarily engaged in agriculture, forestry, fishing and hunting;
- in private households employing staff;
- in overseas embassies, consulates, etc.;
- located outside Australia.

Survey design

5. A sample of approximately 4,300 employers is selected from the ABS register of businesses to ensure adequate State and industry representation. The sample is updated each quarter to take account of new businesses, those which have ceased operation and structural changes such as takeovers and mergers. The statistical unit for the survey comprises all activities of an enterprise in a particular State or Territory. Each statistical unit is classified to an industry which reflects the predominant activity of the enterprise in the State or Territory. In a small number of cases where an enterprise has significant employment in more than one industry, a separate statistical unit is created for each industry. The statistical units are stratified by State, industry and size of employment and a simple random sample is selected from each stratum.

Definitions

6. *Reference date* for the survey is the third Friday of the middle month of the quarter. For the most recent survey this was 16 May 1986.

7. A *job vacancy* is a job available for immediate filling on the survey date and for which recruitment action had been taken by the employer. Recruitment action includes efforts to fill vacancies by advertising, by factory notices,

by notifying government or private employment agencies or trade unions and by contacting, interviewing or selecting applicants already registered with the enterprise or organisation. Excluded are jobs available only to persons already employed by the enterprise or organisation. This point is particularly relevant to the Australian Public Service and the Public Services of each of the States and the Northern Territory. Also excluded are vacancies:

- (a) which remain unfilled for less than one day's duration;
- (b) to be filled by employees returning from paid or unpaid leave or after industrial disputes;
- (c) not available for immediate filling on the survey date;
- (d) not available within the particular State or Territory to which the return relates;
- (e) for work carried out under contract;
- (f) for which no effort is being made to fill the position.

8. The *job vacancy rate* is calculated by expressing the number of job vacancies as a percentage of the number of employees plus vacancies.

9. For the purposes of this survey, *vacancies registered with the CES* are vacancies which employers consider are registered on or before the survey date and which in their opinion have not lapsed prior to the survey date.

Reliability of estimates

10. As the estimates in this publication are based on information relating to a sample of employers rather than a full enumeration, they are subject to sampling variability. That is, they may differ from the figures that would have been produced if the information had been obtained from all employers. This difference, called *sampling error*, should not be confused with inaccuracy that may occur because of imperfections in reporting by respondents or in processing by ABS; such inaccuracy is referred to as *non-sampling error* and may occur in any enumeration, whether it be a full count or sample. Efforts have been made to reduce non-sampling error by careful design of questionnaires, detailed checking of returns and quality control of processing.

11. The sampling error associated with any estimate can be estimated from the sample results. One measure of sampling error is given by the *standard error* which indicates the degree to which an estimate may vary from the value that would have been obtained from a full enumeration (the 'true' figure). There are about two chances in three that a sample estimate differs from the true value by less than one standard error, and about nineteen chances in twenty that the difference will be less than two standard errors.

12. If the standard error of an estimate is large relative to the size of the estimate, this detracts seriously from the

usefulness of that estimate. The *relative standard error* (or SE%) is obtained by expressing the standard error as a percentage of the estimate and provides an alternative expression for the accuracy of an estimate.

13. An example of the use of standard error for the job vacancy estimates is as follows. Table 1 shows the estimated number of job vacancies for Australia at 16 May 1986 as being 54,400, with a standard error of 3,200. Therefore there are about two chances in three that a full enumeration would have given a figure in the range 51,200 to 57,600 and about nineteen chances in twenty that it would be in the range 48,000 to 60,800.

Industry classification

14. Industry is classified according to the *Australian Standard Industrial Classification (ASIC) 1983 Edition, Volume 1—The Classification (1201.0)*.

Seasonal factors

15. Job vacancy figures at different dates may be affected by seasonal influences. Publication of seasonally adjusted figures will not be possible until results of the surveys for several years are available.

Related publications

16. Users may also wish to refer to the following publications which are available on request:

Information Paper: New Statistical Series: Employment, Average Weekly Earnings, Job Vacancies and Overtime (6256.0)

Overtime, Australia (6330.0)—issued quarterly

Average Weekly Earnings, States and Australia (6302.0)—issued quarterly

Employed Wage and Salary Earners, Australia (6248.0)—issued quarterly

17. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia (1101.0)*. The ABS also issues, on Tuesdays and Fridays, a *Publications Advice (1105.0)* which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Unpublished statistics

18. In some cases, the ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, computer print-out or clerically-extracted tabulation. Generally, a charge is made for providing unpublished information. Inquiries should be made to the officer whose name appears in the *Phone Inquiries* section of the Inquiries box at the front of this publication, or to Information Services in the nearest ABS Office.

Symbols and other usages

- nil or rounded to zero
- * subject to sampling variability too high for most practical purposes

19. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.
